LETTER OF REFERENCE

Dear Madam/Sir,

Ljubljana, 28th March 2008

We introduced EFAMT over a year ago and we are using it to manage all the costs in most of the faculties projects. This means that EFAMT is used in over 330 projects. With the use of this application we have greatly increased the transparency and accessibility of the data.

Because our projects differ greatly (Basic applicative programme, Targeted research programmes, Bilateral programmes, Individual research activities – for individual professors, some Framework programme projects, etc.) this means that the reports are different as well. Faced with this challenge EFAMT proved to be highly capable for preparation of different types of reports regardless of the fact that the data is always entered in the same way. We are especially pleased with the quick and efficient preparation of reports for the Monitoring Authorities.

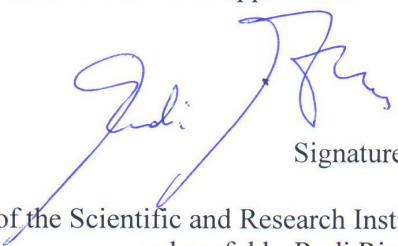

The ability to access the data remotely has been demonstrated as very beneficial, as is used by the professors and researchers on a near constant basis. With the use of EFAMT Permission Control we can determine our own access rights, which brings with it a far larger overview of the data input. Our department has experienced a dramatic decrease of the number interactions from the professors and researchers in search of the information of the financial status of individual projects. This is a fact that pleases the professors and researchers and us alike. The final consequence is that the quality of work is higher and runs more smoothly.

With some additional features we have ensured an optimal use of the EFAMT application. The experts at RR& CO. Knowledge Centre have provided services, which were always delivered on time agreed upon and in line with our highest expectations.

Based on the facts stated above we can recommend the use of the EFAMT application.

Yours faithfully,

Signature:
